

What is claimed is:

1           1. A system for forwarding printed matters, comprising:  
2           an electronic mail analyzing means for receiving an  
3           electronic mail and identifying the destination thereof from  
4           its destination statement; and  
5           a printed matter preparing means for preparing a printed  
6           matter on which is printed information on the destination  
7           identified by said electronic mail analyzing means.

1           2. A system for forwarding printed matters, comprising:  
2           an electronic mail analyzing means for receiving  
3           electronic mail, identifying the destination thereof from its  
4           destination statement and taking out the text thereof; and  
5           a printed matter preparing means for preparing a printed  
6           matter on which are printed information on the destination  
7           identified by said electronic mail analyzing means and the text  
8           taken out by said electronic mail analyzing means.

1           3. The system, as claimed in Claim 1, wherein:  
2           said electronic mail analyzing means identifies the  
3           originating source of said electronic mail, and  
4           said printed matter preparing means prepares a printed  
5           matter on which is further printed information on the originating  
6           source identified by said electronic mail analyzing means.

1           4. The system, as claimed in Claim 1, wherein:

10026428.122701

2           said electronic mail analyzing means identifies the  
3   originating source of said electronic mail; and the system  
4   further includes:

5           a billing information preparing means for preparing  
6   information required for billing the originating source  
7   identified by said electronic mail analyzing means.

1           5. A system for forwarding printed matters, comprising:  
2           an electronic mail analyzing means for receiving an  
3   electronic mail and identifying the destination thereof from  
4   its destination statement; and

5           a print instructing means for handing over information  
6   on the destination identified by said electronic mail analyzing  
7   means to another printed matter forwarding system.

1           6. A system for forwarding printed matters comprising:  
2           an electronic mail analyzing means for receiving an  
3   electronic mail, identifying the destination thereof from its  
4   destination statement and taking out the text thereof; and

5           a print instructing means for handing over information  
6   on the destination identified by said electronic mail analyzing  
7   means and the text taken out by said electronic mail analyzing  
8   means to another printed matter forwarding system.

1           7. The system, as claimed in Claim 5, wherein:

2           said electronic mail analyzing means identifies the  
3   originating source of said electronic mail, and

10026428.122701

4 said print instructing means hands over information on  
5 the originating source identified by said electronic mail  
6 analyzing means to said other printed matter forwarding system.

1 8. The system, as claimed in Claim 5, wherein:

2 said electronic mail analyzing means identifies the  
3 originating source of said electronic mail; and the system  
4 further includes:

5 a billing information preparing means for preparing  
6 information required for billing the originating source  
7 identified by said electronic mail analyzing means.

1 9. A method for forwarding printed matters, comprising:

2 a first step of receiving an electronic mail;

3 a second step of identifying the originating source of  
4 the electronic mail received at said first step;

5 a third step of identifying the destination of the  
6 electronic mail received at said first step from its destination  
7 statement;

8 a fourth step of acquiring the text of the electronic  
9 mail received at said first step;

10 a fifth step of giving an instruction to print information  
11 on the destination identified at said third step and the text  
12 acquired at said fourth step; and

13 a sixth step of preparing information required for billing  
14 the originating source identified at said second step.

10026428.122701

1           10. A method for forwarding printed matters, comprising:  
2           a first step of receiving an electronic mail;  
3           a second step of identifying the originating source of  
4           the electronic mail received at said first step;  
5           a third step of identifying the destination of the  
6           electronic mail received at said first step from its destination  
7           statement;  
8           a fourth step of acquiring the text of the electronic  
9           mail received at said first step;  
10          a fifth step of giving an instruction to print information  
11          on the originating source identified at said second step,  
12          information on the destination identified at said third step  
13          and the text acquired at said fourth step; and  
14          a sixth step of preparing information required for billing  
15          the originating source identified at said second step.

1           11. A storage medium recording thereon a program enabling  
2           a computer to execute:  
3           first processing to receive an electronic mail;  
4           second processing to identify the originating source of  
5           the electronic mail identified by said first processing;  
6           third processing to identify the destination of the  
7           electronic mail received by said first processing from its  
8           destination statement;  
9           fourth processing to acquire the text of the electronic  
10          mail received by said first processing;

11 fifth processing to give an instruction to print  
12 information on the destination identified by said third  
13 processing and the text acquired by said fourth processing;  
14 and

15 sixth processing to prepare information required for  
16 billing the originating source identified by said second  
17 processing.

1 12. Astoragemediumrecordingthereonaprogramenabling  
2 a computer to execute:

3 first processing to receive an electronic mail;

4 second processing to identify the originating source of  
5 the electronic mail identified by said first processing;

6 third processing to identify the destination of the  
7 electronic mail received by said first processing from its  
8 destination statement;

9 fourth processing to acquire the text of the electronic  
10 mail received by said first processing;

11 fifth processing to give an instruction to print  
12 information on the originating source identified by said second  
13 processing, information on the destination identified by said  
14 thirdprocessingandthetextacquiredbysaidfourthprocessing;  
15 and

16 sixth processing to prepare information required for  
17 billing the originating source identified by said second  
18 processing.

10026428.122701

1           13. A storage medium group in which said program claimed  
2 in Claim 11 is divided and each divided segment is recorded  
3 on one or another of a plurality of storage media.

1           14. A program embodied in electrical signals, said  
2 program enabling a computer to execute:

3               first processing to receive an electronic mail;

4               second processing to identify the originating source of  
5 the electronic mail identified by said first processing;

6               third processing to identify the destination of the  
7 electronic mail received by said first processing from its  
8 destination statement;

9               fourth processing to acquire the text of the electronic  
10 mail received by said first processing;

11              fifth processing to give an instruction to print  
12 information on the destination identified by said third  
13 processing and the text acquired by said fourth processing;  
14 and

15              sixth processing to prepare information required for  
16 billing the originating source identified by said second  
17 processing.

1           15. A program embodied in electrical signals, said  
2 program enabling a computer to execute:

3               first processing to receive an electronic mail;

4               second processing to identify the originating source of

10026428-122701

5 the electronic mail identified by said first processing;

6 third processing to identify the destination of the  
7 electronic mail received by said first processing from its  
8 destination statement;

9 fourth processing to acquire the text of the electronic  
10 mail received by said first processing;

11 fifth processing to give an instruction to print  
12 information on the originating source identified by said second  
13 processing, information on the destination identified by said  
14 third processing and the text acquired by said fourth processing;  
15 and

16 sixth processing to prepare information required for  
17 billing the originating source identified by said second  
18 processing.
